17. Press the "Finish" button

18. Choose the new virutal device from the "Availble Virtual Devide" list

19. Press the "OK" button

20. The app will now run on the emulator

Known errors

- If the app crashes the first time you start it. Check if the emulator have installed SD card. There should be a icon on the top left corner. Install the SD card as an Internal storage unit

and start the app again. This might happen if the emulated device don't have enough storage. This can though be changed in the AVD Manager (Tools -¿ Android).
